Systemic cancer therapy turns into personalized therapy: example non-small cell lung cancer (NSCLC)

10 years ago:
chemotherapy
in unselected patients

Response Rate: 20-30%
Med. Survival: 1 year

today:
targeted therapy (and immunotherapy)
in molecularly selected subgroups

Response Rates: 60 – 70%
Med. Survival 5 years and more
Better tolerability

Targetable mutations in NSCLC (Jan. 2019)

(without resistance mutations and without markers for immunotherapy)

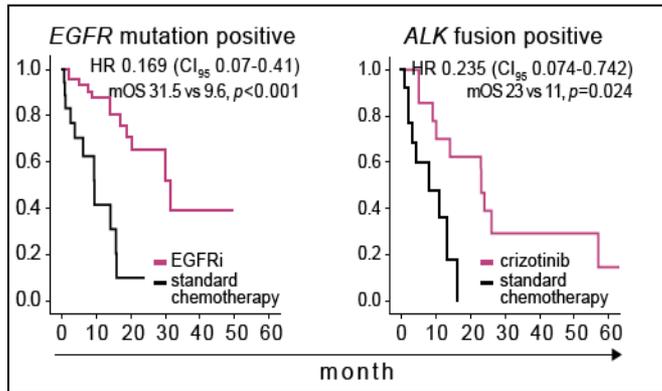

Gene	Alteration	frequency (NSCLC)	drugs
EGFR	actvating mutation (ex 19 del., L858R)	10 %	erlotinib, gefitinib, afatinib, osimertinib
ALK	fusions	3%	crizotinib, alectinib, ceritinib,.....
ROS 1	fusions	1%	crizotinib, (cabozantinib, ponatinib....)
BRAFV600	mutation	2%	dabrafenib + trametinib
MET	amplification (GCN>9)	1%	crizotinib, capmatinib, tepotinib
MET	exon 14 skipping	2%	
MET	fusions	< 1%	
RET	fusions	< 1%	cabozantinib, vandetanib, alectinib, LOXO-292
NRG1	fusions	< 1%	afatinib
HER2	mutation	1-2%	(trastuzumab, pertuzumab)
NTRK 1-3	fusions	< 1% (?)	larotrectinib, entrectinib
EGFR	exon 20 insertion	< 1%	poziotinib
FGFR 1-3	fusions, mutations	1% (each)	erdafinib, BGJ398.....
KRAS	mutation	20%	LTT462 (ERKi.) + LXH254 (panRAFi.)

standard
 off-label, trial
 trial only

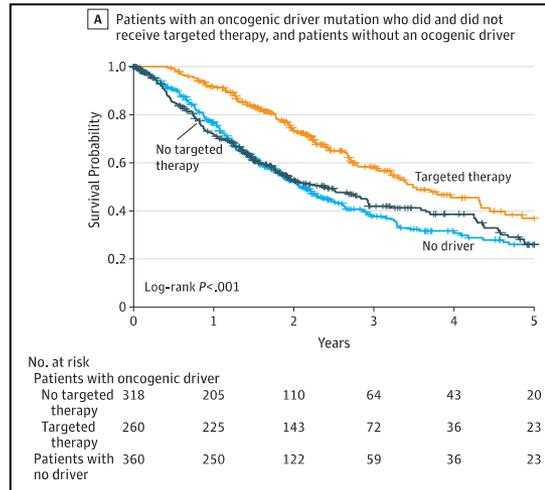

Personalized treatment prolongs survival substantially

Lung cancer patients with ROS1 fusion: Molecular testing, off-label treatment and clinical trials save lives

Challenges for the implementation of personalized cancer care into clinical routine

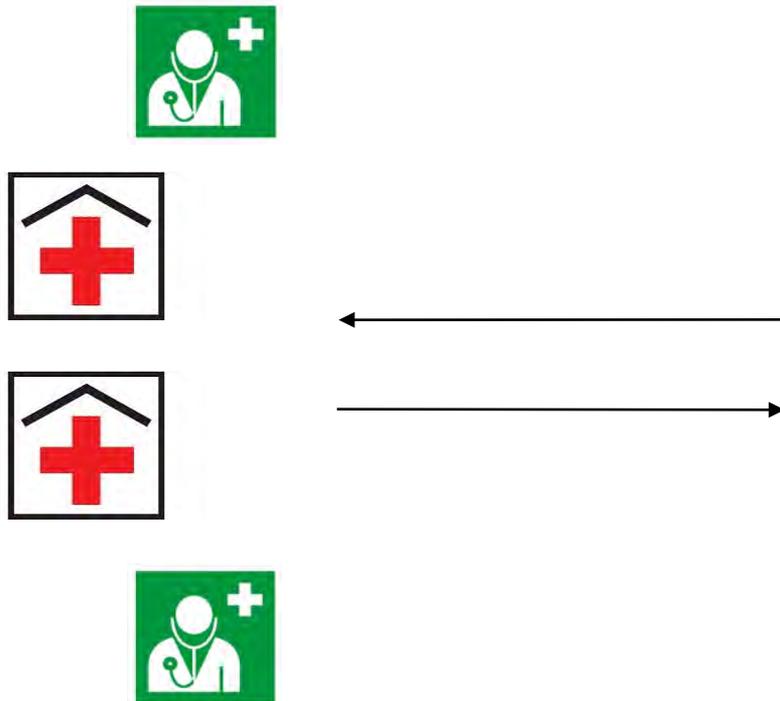

- Implementation of high-quality **molecular multiplex diagnostics**
- State-of-the-art **consultation** with regard to therapeutic consequences
- Rapid **innovation transfer** (new driver mutations) from the academic centers into broad cancer patient care
- **Evaluation** of post-approval and off-label personalized therapies
- Data-based **evidence-generation** (learning system)

Urgent need for building networks

treat close to home

*centralize diagnostics + consultation
+ evaluation*

Oncology Centers of Excellence

- Molecular diagnostics (NGS, WGS, RNA)
- Molecular Tumorboards
- Therapy recommendations
- Translational research
- Databases

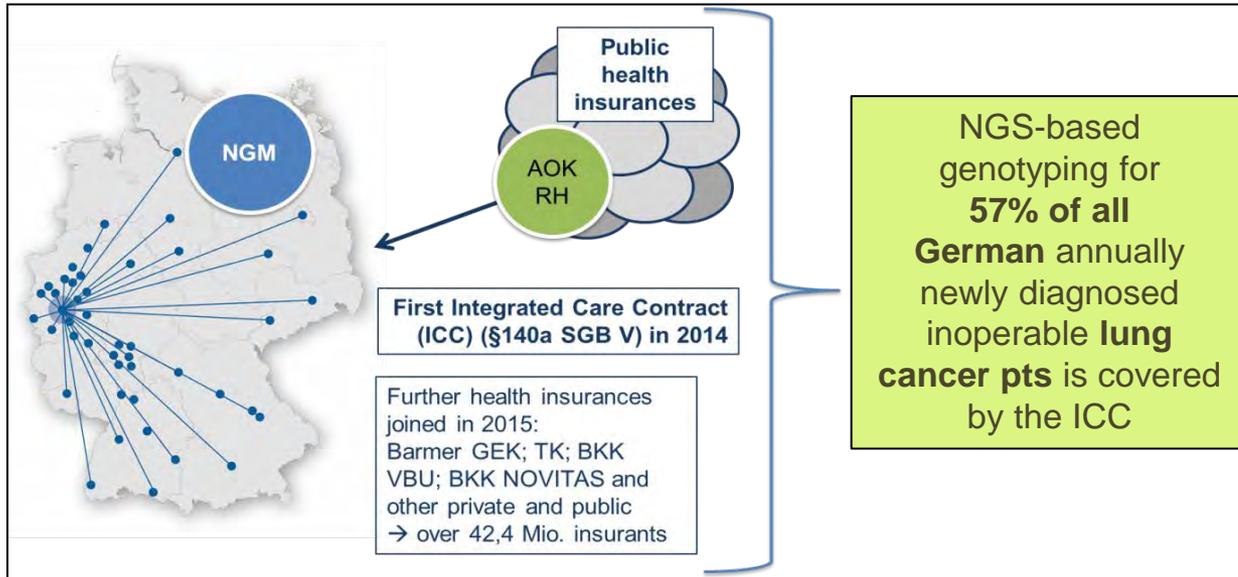

Network Genomic Medicine

founded in 2010 with funding of ministry for innovation NRW
speakers: J.Wolf, R.Büttner; coordinator: A.Kron

Network
Genomic Medicine
Lung Cancer

www.ngm-cancer.com

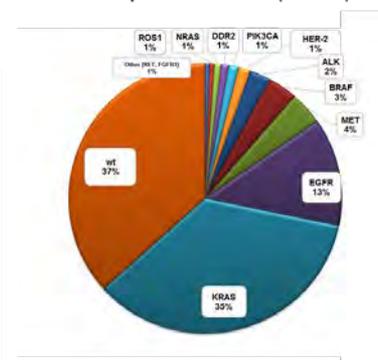

- Centralised NGS-testing of ca. 5000 German lung cancer patients from **ca. 300 referring centers** (ca. 10% of German patients)
- Counseling of referring partners: therapy recommendations
- Clinical trial program with focus on early phase trials
- Cost reimbursement by health insurances (I.V. contract)
- **Central database with ca. 20.000 pts. with genomic and clinical annotation**

> proof of principle for implementation of personalized care

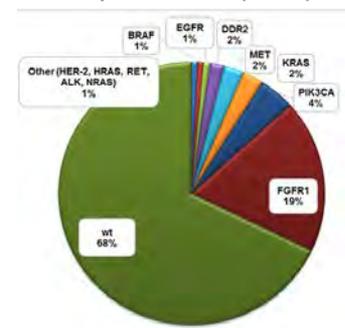

NGM-associated personalized clinical trial program

<p>Phase I/II platform (pharma trials)</p>	<p>EGFR (3rd gen.) mono and combos, FIM ALK (2nd gen.), FIM METamp, METex.14, phase II ROS1, phase I NTRK, BRAF, KRAS, FIM FGFRamp, FIM DLL3 (SCLC), phase II RETfus, phase II</p>
<p>Investigator-initiated trials</p>	<p>EGFR+MEK (EATON), phase I ROS 1 (EUCROSS), phase II HER2mut (TRY), phase II FGFRfus+mut (FIND), phase II TMB (I-O; BIOLUMA), phase II</p>

Non-Squamous NSCLC (n=4244)

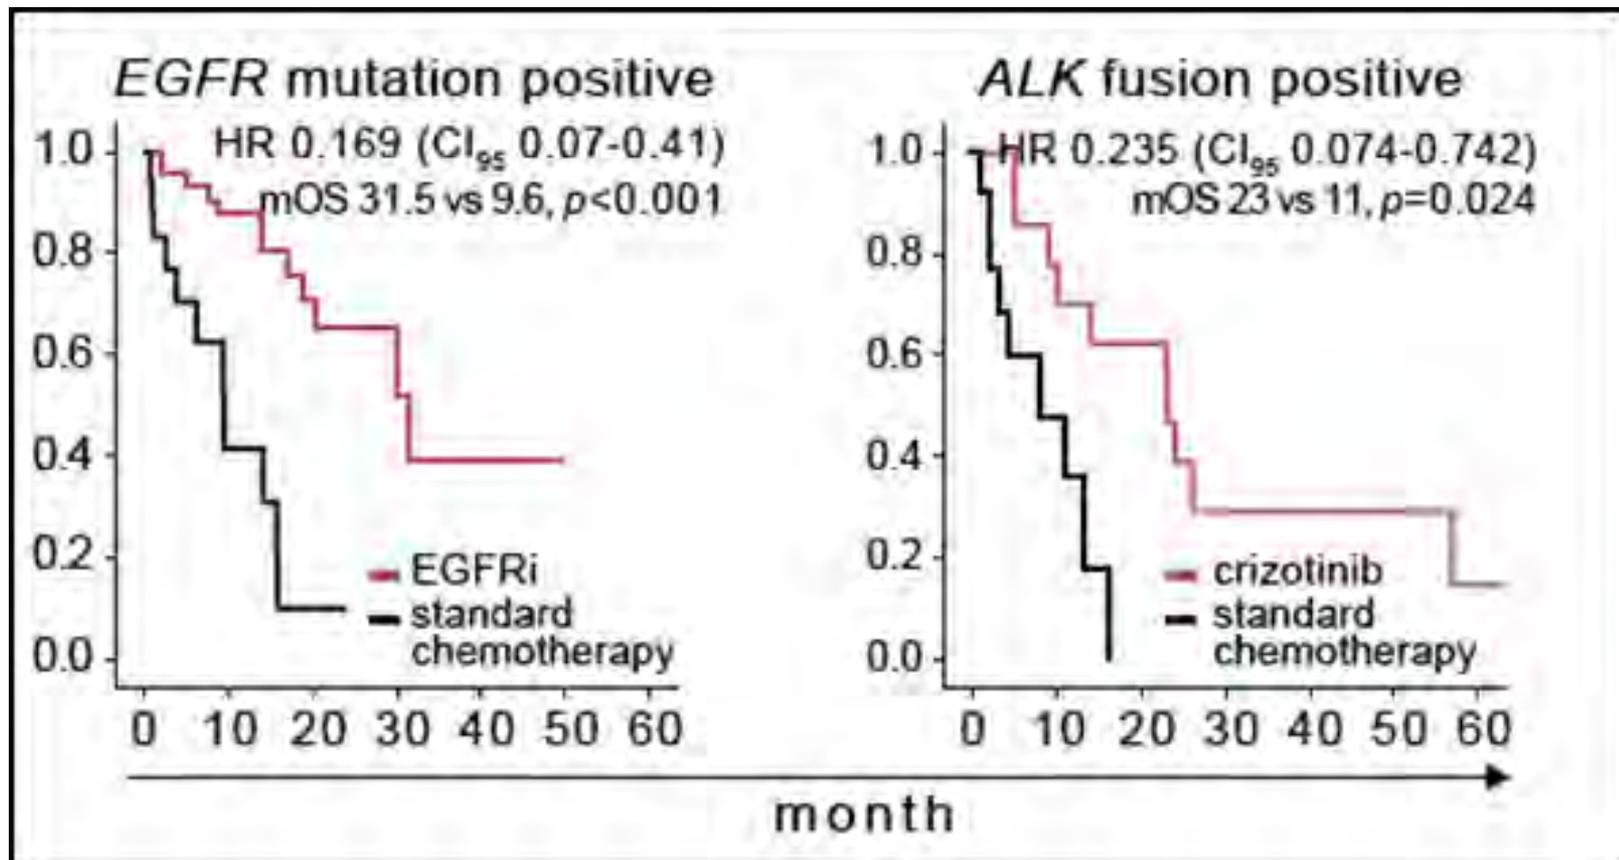

Squamous NSCLC (n=1498)

- > to treat all patients according to the genetic vulnerability of her/his tumor
- > to allow patients early access to innovative drugs
- > to allow proof-of-concept
- > to develop new treatment approaches for small genetic subgroups

1st NGM Evaluation 2013:

Strong OS benefit with personalized therapies

Nationwide extension of the NGM-model

> national Network Genomic Medicine

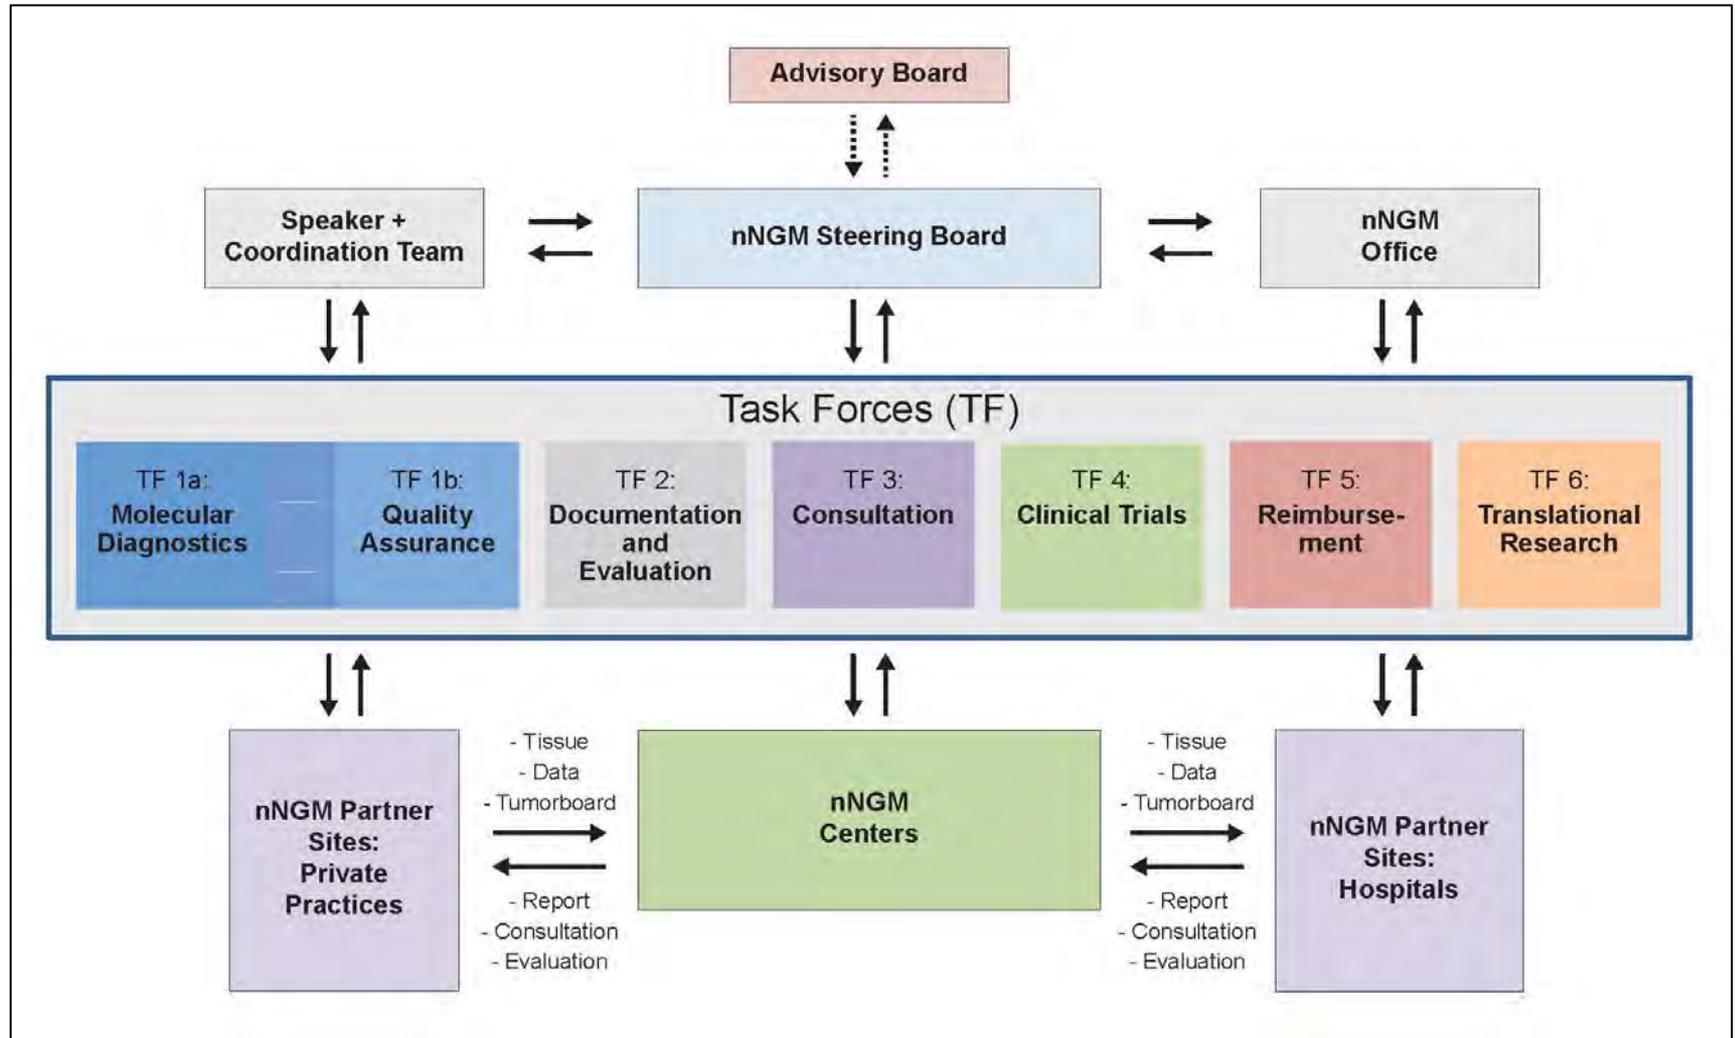

- 10 / 16 Grant application to German Cancer Aid (DKH)
- **04 / 18 Start funding of nNGM by DKH**

Initial nNGM centers = 15 DKH-funded Oncology Centers of Excellence (CCCs):

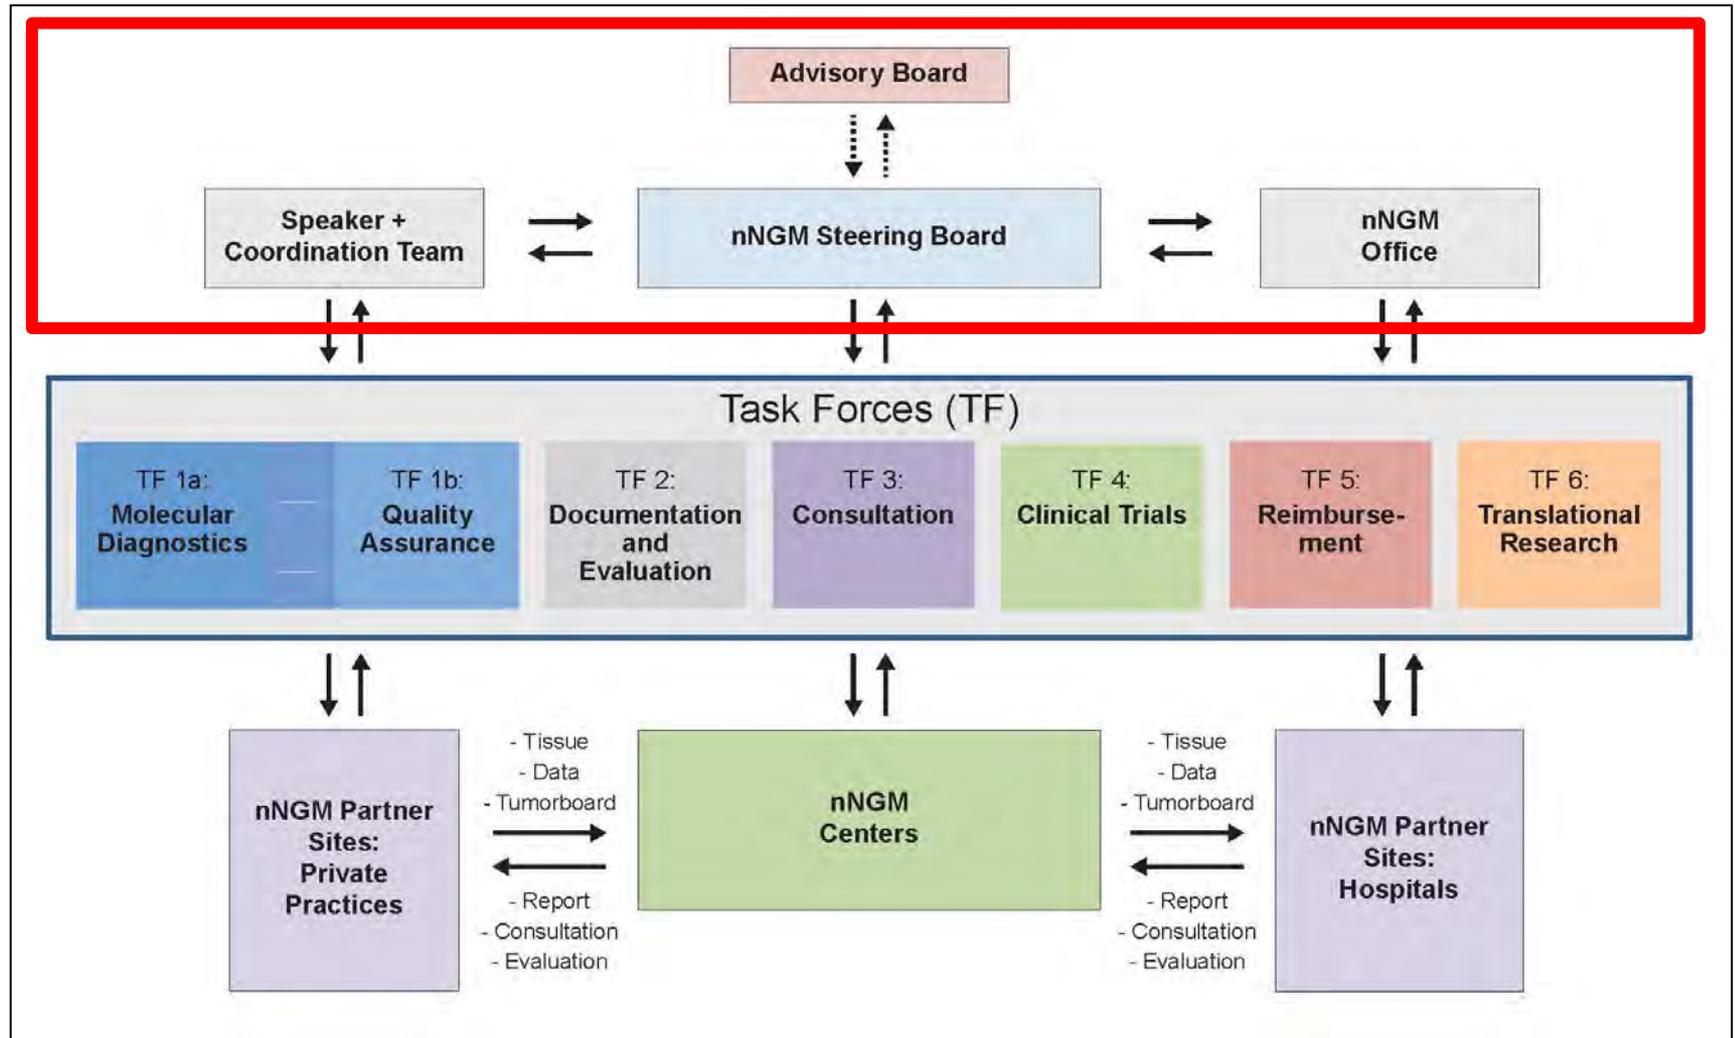

Berlin, Dresden, Düsseldorf, Erlangen, Essen, Frankfurt, Freiburg, Hamburg, Heidelberg, Köln/Bonn, Mainz, München (LMU/TU), Tübingen-Stuttgart, Ulm, Würzburg

- 11 / 18 1st positive evaluation by DKH reviewers

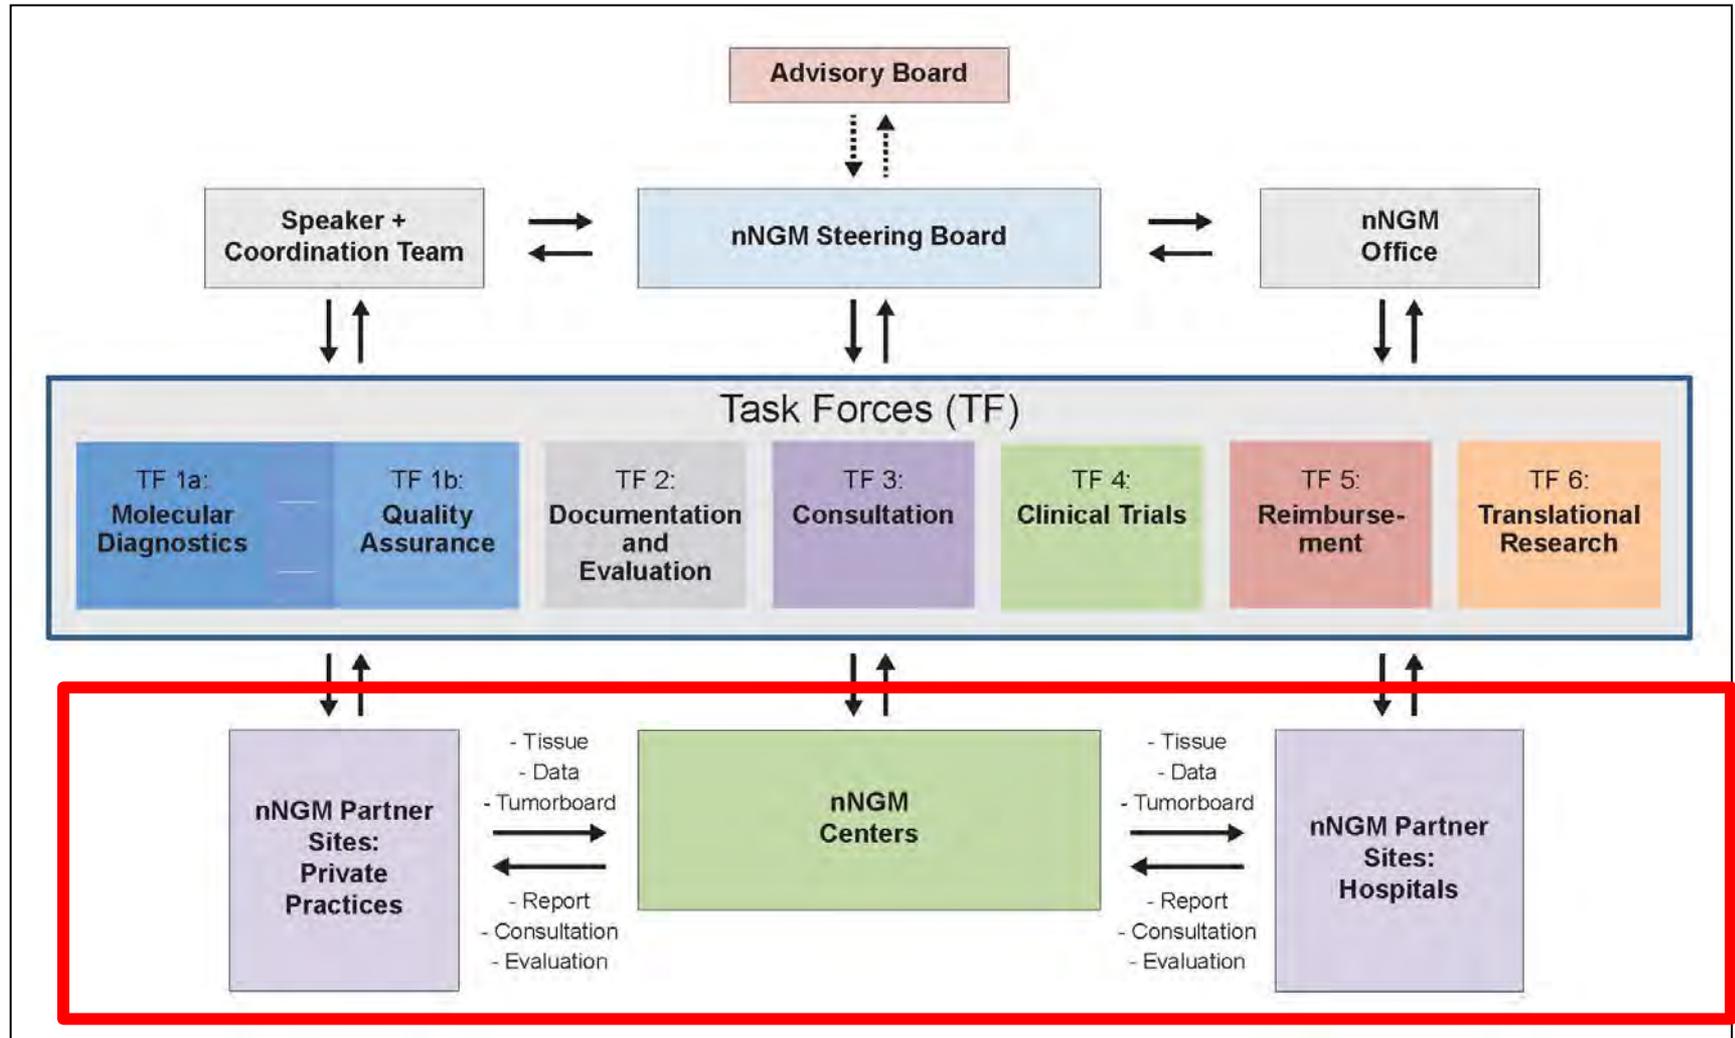

Structure of nNGM: governance, task forces, regional networks

TF 1b: QA Molecular Diagnostics

Speakers: P. Schirmacher, T. Kirchner, M.Hummel

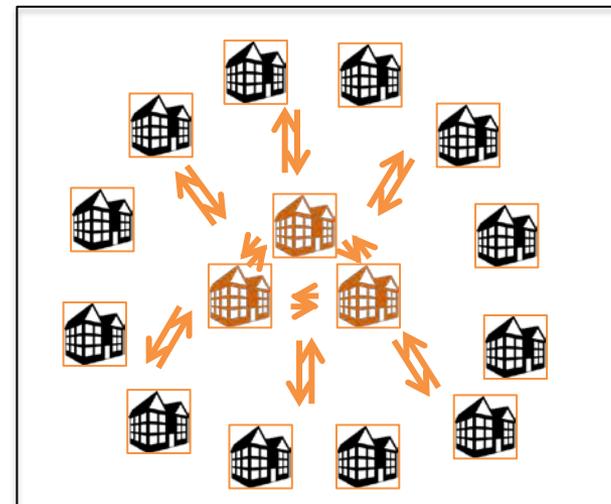

NGS Proficiency Testing

1. Samples tested and retested by reference centers
2. Test and reporting by all centers

NGS Performance Testing

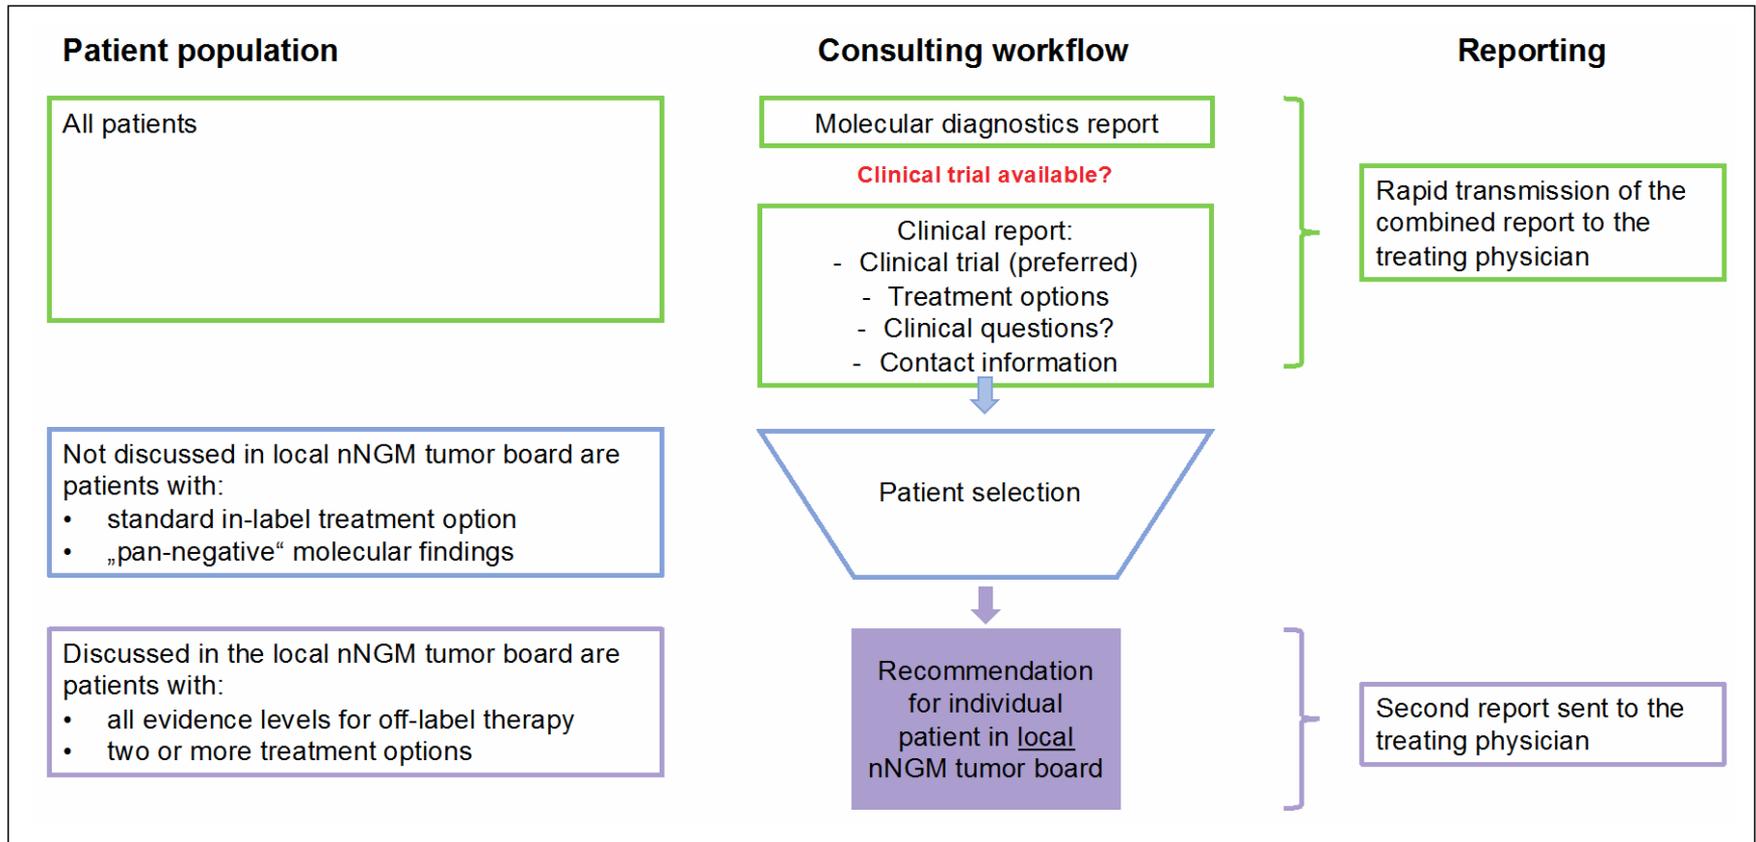

1. Random sample identification in nNGM centers
2. Retesting by reference centers

TF 3: Consultation > harmonized workflow

Speakers: C.Brandts, E.Schröck, N.v.Bubnoff

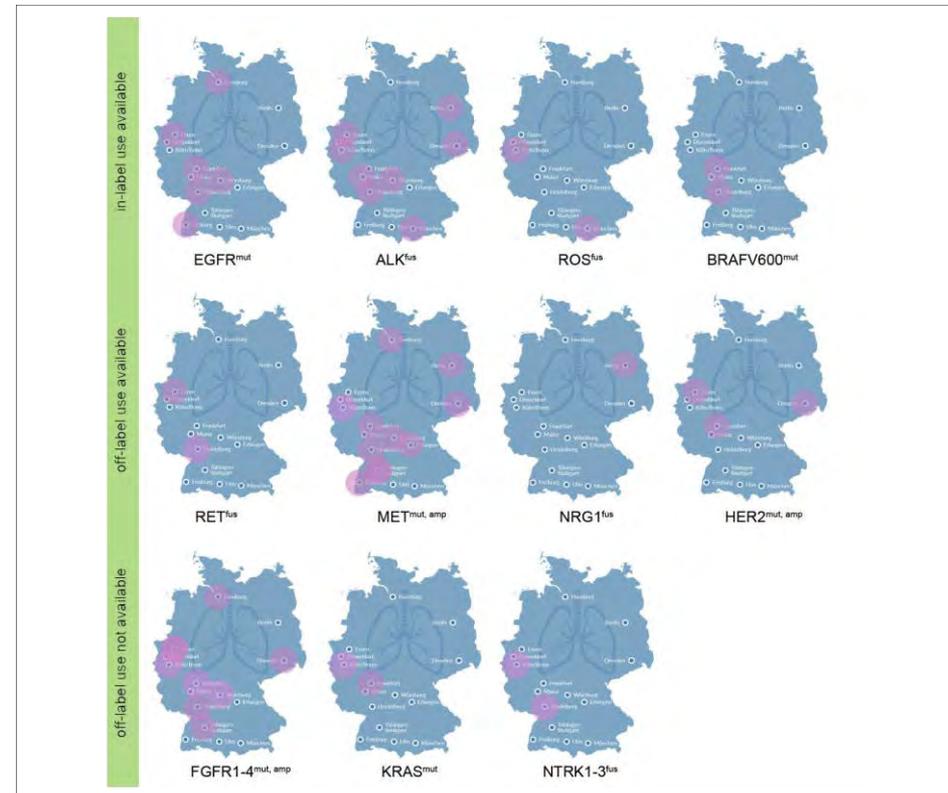

in collaboration with A. Heyll, MDK Kompetenzzentrum Onkologie

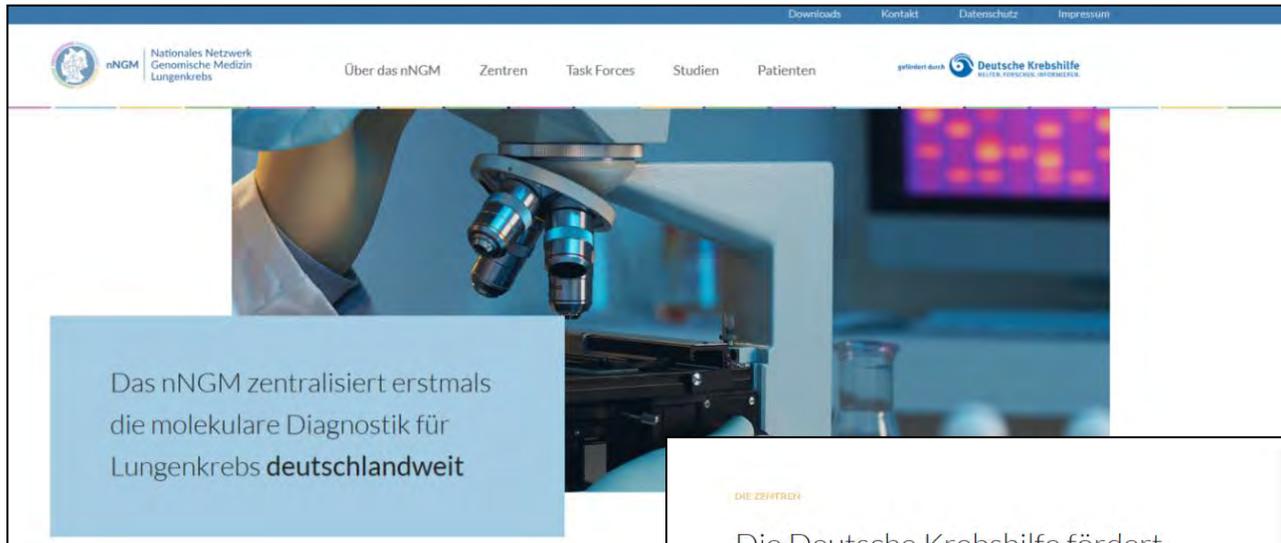

TF 4: Clinical Trials

Speakers: J.Wolf, M.Sebastian, M.Thomas

- **Status quo assessment of trial activity in nNGM centers**
> harmonization
- **Central Clinical Trial Registry in collaboration with DKTK**
> www.nngm.de
- **1st nNGM trial launched in Q1 2019: FGFR-inhibition in squamous cell lung cancer (phase II IIT FIND)**

DIE ZENTREN

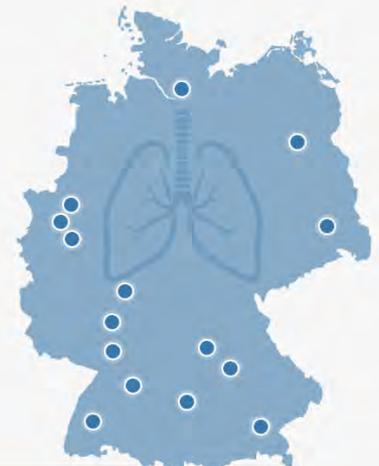

Die Deutsche Krebshilfe fördert 15 universitäre Krebszentren

Über ein bundesweites Netzwerk sollen in Deutschland künftig alle Patienten mit fortgeschrittenem Lungenkrebs Zugang zu molekularer Diagnostik und innovativen Therapien erhalten.

Dafür schließen sich 15 universitäre Krebszentren im „nationalen Netzwerk Genomische Medizin (nNGM) Lungenkrebs“ zusammen – darunter alle 13 onkologischen Spitzenzentren, die aktuell von der Deutschen Krebshilfe gefördert werden.

nNGM ist eine Weiterentwicklung des Kölner Netzwerks Genomische Medizin ([zur Website](#)), das sich seit 2010 erfolgreich für die Implementierung personalisierter Therapien in der Routineversorgung von Patienten mit Lungenkrebs einsetzt. Ziel des bundesweiten Netzwerks ist, den schwerkranken Patienten Zugang zu modernster molekularer Diagnostik und neuesten Therapien, auch im Rahmen klinischer Studien, zu ermöglichen.

Die Deutsche Krebshilfe unterstützt dieses Verbundprojekt seit dem 1. April 2018.
